

## **Product Description**

Pioneering GTPase and Oncogene Product Development since 2010

## **HUMAN ADGRE2 FULL LENGTH PROTEIN**

Cat.#: 11071

**Product Name:** Human ADGRE2 Full Length Protein

**Size:** 10 μg, 50 μg and 100 μg

Synonyms: CD312; CD97; EMR2; VBU

for this gene. [provided by RefSeq, Aug 2012]

Target: ADGRE2

**UNIPROT ID:** Q9UHX3

**Background:** This gene encodes a member of the class B seven-span transmembrane (TM7) subfamily of G-protein coupled receptors. These proteins are characterized by an extended extracellular region with a variable number of N-terminal epidermal growth factor-like domains coupled to a TM7 domain via a mucin-like spacer domain. The encoded protein is expressed mainly in myeloid cells where it promotes cell-cell adhesion through interaction with chondroitin sulfate chains. This gene is situated in a cluster of related genes on chromosome 19. Alternatively spliced transcript variants encoding multiple isoforms have been observed

Species/Host: HEK293

Molecular Weight: The human full length ADGRE2 protein has a MW of 90.5

kDa

**Formulation & Reconstitution:** Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

**Storage & Shipping:** Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
