Background: Rho GTPases play a fundamental role in numerous cellular processes triggered by extracellular stimuli that work through G protein coupled receptors. The encoded protein belongs to a family of cytoplasmic proteins that activate the Ras-like family of Rho proteins by exchanging bound GDP for GTP. It forms a complex with the small GTP binding protein Rac1 and recruits Rac1 to membrane ruffles and to focal adhesions. This protein can induce membrane ruffling. Multiple alternatively spliced transcript variants encoding different isoforms have been described for this gene.

Immunohistochemistry analysis of paraffin embedded Human gastric cancer tissue using 217040 (ARHGEF7 Antibody) at a dilution of 1/40 (Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human gastric cancer tissue is first treated with the fusion protein and then with 217040 (Anti-ARHGEF7 Antibody) at dilution 1/40.

The image on the left is immunohistochemistry of paraffin-embedded Human thyroid cancer tissue using 217040 (Anti-ARHGEF7 Antibody) at a dilution of 1/40.

In comparison with the IHC on the left, the same paraffin-embedded Human thyroid cancer tissue is first treated with fusion protein and then with D221692 (Anti-ARHGEF7 Antibody) at dilution 1/40.
