Background: Cell membrane-cytoskeleton-associated protein that plays a role in the regulation of actin polymerization at the barbed end of actin filaments. Prevents F-actin heterodimeric capping protein (CP) activity at the leading edges of migrating cells, and hence generates uncapped barbed ends and enhances actin polymerization, however, seems unable to nucleate filaments (PubMed:16054028). Plays a role in lamellipodial protrusion formations and cell migration (PubMed:19846667).

Immunohistochemistry analysis of paraffin embedded Human thyroid cancer tissue using 221676(CARMIL1 Antibody) at a dilution of 1/35(Cytoplasm and Cell membrane).

In comparison with the IHC on the left, the same paraffin-embedded Human thyroid cancer tissue is first treated with the synthetic peptide and then with 221676(Anti-CARMIL1 Antibody) at dilution 1/35.

The image on the left is immunohistochemistry of paraffin-embedded Human tonsil tissue using 221676(Anti-CARMIL1 Antibody) at a dilution of 1/35.

In comparison with the IHC on the left, the same paraffin-embedded Human tonsil tissue is first treated with synthetic peptide and then with D263377(Anti-CARMIL1 Antibody) at dilution 1/35.
