Background: The protein encoded by this gene belongs to the Ser/Thr protein kinase family. It is required for checkpoint mediated cell cycle arrest in response to DNA damage or the presence of unreplicated DNA. This protein acts to integrate signals from ATM and ATR, two cell cycle proteins involved in DNA damage responses, that also associate with chromatin in meiotic prophase I. Phosphorylation of CDC25A protein phosphatase by this protein is required for cells to delay cell cycle progression in response to double-strand DNA breaks. Several alternatively spliced transcript variants have been found for this gene.

Immunohistochemistry analysis of paraffin embedded Human liver cancer tissue using 221730(CHEK1 Antibody) at a dilution of 1/20(Cytoplasm).

In comparision with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with the synthetic peptide and then with 221730(Anti-CHEK1 Antibody) at dilution 1/20.

The image on the left is immunohistochemistry of paraffinembedded Human ovarian cancer tissue using 221730(Anti-CHEK1 Antibody) at a dilution of 1/20.

In comparision with the IHC on the left, the same paraffin-embedded Human ovarian cancer tissue is first treated with synthetic peptide and then with D263449(Anti-CHEK1 Antibody) at dilution 1/20.
