Background: This gene belongs to the cytokine gene family which encode secreted proteins involved in immunoregulatory and inflammatory processes. The protein encoded by this gene is structurally related to the CXC (Cys-X-Cys) subfamily of cytokines. Members of this subfamily are characterized by two cysteines separated by a single amino acid. This cytokine displays chemotactic activity for monocytes but not for lymphocytes, dendritic cells, neutrophils or macrophages. It has been implicated that this cytokine is involved in the homeostasis of monocyte-derived macrophages rather than in inflammation.

Immunohistochemistry analysis of paraffin embedded Human breast cancer tissue using 216530(CXCL14 Antibody) at a dilution of 1/60(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human breast cancer tissue is first treated with the fusion protein and then with 216530(Anti-CXCL14 Antibody) at dilution 1/60.

The image on the left is immunohistochemistry of paraffin-embedded Human brain tissue using 216530(Anti-CXCL14 Antibody) at a dilution of 1/60.
