

CYCLIN A2 RABBIT MAB

Cat.#: N262088

Product Name: Anti-Cyclin A2 Rabbit Monoclonal Antibody

Synonyms: CCN1; CCNA

UNIPROT ID: P20248

Background: The protein encoded by this gene belongs to the highly conserved cyclin family, whose members are characterized by a dramatic periodicity in protein abundance through the cell cycle. Cyclins function as regulators of CDK kinases. Different cyclins exhibit distinct expression and degradation patterns which contribute to the temporal coordination of each mitotic event. In contrast to cyclin A1, which is present only in germ cells, this cyclin is expressed in all tissues. This cyclin binds and activates CDC2 or CDK2 kinases, and thus promotes both cell cycle G1/S and G2/M transitions.
