

GBE1 RABBIT PAB

Cat.#: S219399

Product Name: Anti-GBE1 Rabbit Polyclonal Antibody

Synonyms: GBE; APBD; GSD4

UNIPROT ID: Q04446 (Gene Accession - BC012098)

Background: The protein encoded by this gene is a glycogen branching enzyme that catalyzes the transfer of alpha-1,4-linked glucosyl units from the outer end of a glycogen chain to an alpha-1,6 position on the same or a neighboring glycogen chain. Branching of the chains is essential to increase the solubility of the glycogen molecule and, consequently, in reducing the osmotic pressure within cells. Highest level of this enzyme are found in liver and muscle. Mutations in this gene are associated with glycogen storage disease IV (also known as Andersen's disease).

Immunogen: Fusion protein of human GBE1

Applications: ELISA, IHC

Recommended Dilutions: IHC: 50-200; ELISA: 5000-10000

Host Species: Rabbit

Clonality: Rabbit Polyclonal

Isotype: Immunogen-specific rabbit IgG

Purification: Antigen affinity purification

Species Reactivity: Human, Mouse

Constituents: PBS (without Mg²⁺ and Ca²⁺), pH 7.4, 150 mM NaCl, 0.05% Sodium Azide and 40% glycerol

Research Areas: Metabolism, Cancer

Storage & Shipping: Store at -20°C. Avoid repeated freezing and thawing

Immunohistochemistry analysis of paraffin embedded Human gastric cancer tissue using 219399(GBE1 Antibody) at a dilution of 1/80(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human gastric cancer tissue is first treated with the fusion protein and then with 219399(Anti-GBE1 Antibody) at dilution 1/80.

The image on the left is immunohistochemistry of paraffin-embedded Human colorectal cancer tissue using 219399(Anti-GBE1 Antibody) at a dilution of 1/80.

In comparison with the IHC on the left, the same paraffin-embedded Human colorectal cancer tissue is first treated with fusion protein and then with D226764(Anti-GBE1 Antibody) at dilution 1/80.
