Background: The protein encoded by this gene belongs to the inhibitor of DNA binding family, members of which are transcriptional regulators that contain a helix-loop-helix (HLH) domain but not a basic domain. Members of the inhibitor of DNA binding family inhibit the functions of basic helix-loop-helix transcription factors in a dominant-negative manner by suppressing their heterodimerization partners through the HLH domains. This protein may play a role in negatively regulating cell differentiation. A pseudogene of this gene is located on chromosome 3.

Immunohistochemistry analysis of paraffin embedded Human breast cancer tissue using 220617(ID2 Antibody) at a dilution of 1/30(Cytoplasm or Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human breast cancer tissue is first treated with the synthetic peptide and then with 220617(Anti-ID2 Antibody) at dilution 1/30.

The image on the left is immunohistochemistry of paraffin-embedded Human liver cancer tissue using 220617(Anti-ID2 Antibody) at a dilution of 1/30.

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with synthetic peptide and then with D261770(Anti-ID2 Antibody) at dilution 1/30.
