Background: This gene encodes a member of family I of the G protein-coupled receptors, as well as the EDG family of proteins. This protein functions as a lysophosphatidic acid (LPA) receptor and contributes to Ca²⁺ mobilization, a critical cellular response to LPA in cells, through association with Gi and Gq proteins. An alternative splice variant has been described but its full length sequence has not been determined.

Immunohistochemistry analysis of paraffin embedded Human gastric cancer tissue using 214015 (LPAR2 Antibody) at a dilution of 1/40 (Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human gastric cancer tissue is first treated with the synthetic peptide and then with 214015 (Anti-LPAR2 Antibody) at dilution 1/40.
