Background: This gene encodes a small peptide hormone that is secreted by cells of the small intestine to regulate gastrointestinal contractions and motility. Proteolytic processing of the secreted protein produces the mature peptide and a byproduct referred to as motilin-associated peptide (MAP). Three transcript variants encoding different preproprotein isoforms but the same mature peptide have been found for this gene.

Immunohistochemistry analysis of paraffin embedded Human tonsil tissue using 216660(MLN Antibody) at a dilution of 1/75(Secreted).

In comparison with the IHC on the left, the same paraffin-embedded Human tonsil tissue is first treated with the fusion protein and then with 216660(Anti-MLN Antibody) at dilution 1/75.
