

POLB RABBIT PAB

Cat.#: S219468

Product Name: Anti-POLB Rabbit Polyclonal Antibody

Synonyms:

UNIPROT ID: P06746 (Gene Accession - BC106909)

Background: The protein encoded by this gene is a DNA polymerase involved in base excision and repair, also called gap-filling DNA synthesis. The encoded protein, acting as a monomer, is normally found in the cytoplasm, but it translocates to the nucleus upon DNA damage. Several transcript variants of this gene exist, but the full-length nature of only one has been described to date. [provided by RefSeq, Sep 2011]

Immunohistochemistry analysis of paraffin embedded Human brain tissue using 219468 (POLB Antibody) at a dilution of 1/135 (Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human brain tissue is first treated with the fusion protein and then with 219468 (Anti-POLB Antibody) at dilution 1/135.

The image on the left is immunohistochemistry of paraffin-embedded Human breast cancer tissue using 219468 (Anti-POLB Antibody) at a dilution of 1/135.

In comparison with the IHC on the left, the same paraffin-embedded Human breast cancer tissue is first treated with fusion protein and then with D227211 (Anti-POLB Antibody) at dilution 1/135.
