Background: The protein encoded by this gene is a glutathione-independent prostaglandin D synthase that catalyzes the conversion of prostaglandin H₂ (PGH₂) to prostaglandin D₂ (PGD₂). PGD₂ functions as a neuromodulator as well as a trophic factor in the central nervous system. PGD₂ is also involved in smooth muscle contraction/relaxation and is a potent inhibitor of platelet aggregation. This gene is preferentially expressed in brain. Studies with transgenic mice overexpressing this gene suggest that this gene may be also involved in the regulation of non-rapid eye movement sleep.

Immunohistochemistry analysis of paraffin embedded Human colorectal cancer tissue using 216756(PTGDS Antibody) at a dilution of 1/120(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human colorectal cancer tissue is first treated with the fusion protein and then with 216756(Anti-PTGDS Antibody) at dilution 1/120.

The image on the left is immunohistochemistry of paraffin-embedded Human tonsil tissue using 216756(Anti-PTGDS Antibody) at a dilution of 1/120.

In comparison with the IHC on the left, the same paraffin-embedded Human tonsil tissue is first treated with fusion protein and then with D221182(Anti-PTGDS Antibody) at dilution 1/120.
