CANIS LUPUS FAMILIARIS ANXA2 PROTEIN, HIS TAG

Cat.#: 12124

Product Name: Canis Lupus Familiaris ANXA2 Protein

Size : 10 μg, 50 μg and 100 μg

Synonyms: Annexin A2;Annexin-2

Target: ANXA2

UNIPROT ID: Q6TEQ7

Description: Recombinant canis ANXA2 protein with C-terminal 6xHis tag

Background: This gene encodes a member of the annexin family. Members of this calcium-dependent phospholipid-binding protein family play a role in the regulation of cellular growth and in signal transduction pathways. This protein functions as an autocrine factor which heightens osteoclast formation and bone resorption. This gene has three pseudogenes located on chromosomes 4, 9 and 10, respectively. Multiple alternatively spliced transcript variants encoding different isoforms have been found for this gene. Annexin A2 expression has been found to correlate with resistance to treatment against various cancer forms. [provided by RefSeq, Dec 2019]

Species/Host: HEK293

Molecular Weight: The protein has a predicted molecular mass of 39.3 kDa after removal of the signal peptide. The apparent molecular mass of dANXA2-His is approximately 35-55 kDa due to glycosylation.

Molecular Characterization: ANXA2(Ser2-Asp339) 6×His tag

Purity: The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20ºC to -80ºC for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80ºC (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
