

CDC42 CHICKEN**Chicken Cdc42****Cat. #:** 21019**Gene Symbol:** CDC42**Description:** Anti-Cdc42 Chicken Polyclonal Antibody

Background: Small GTPases are a super-family of cellular signaling regulators. Cdc42 belongs to the Rho sub-family of GTPases that regulate cell motility, cell division, and gene transcription. GTP binding increases the activity of Cdc42, and the hydrolysis of GTP to GDP renders it inactive. GTP hydrolysis is aided by GTPase activating proteins (GAPs), while exchange of GDP for GTP is facilitated by guanine nucleotide exchange factors (GEFs).
