

HUMAN CLDN7 FULL LENGTH PROTEIN

Cat.#: 11061

Product Name: Human CLDN7 Full Length Protein

Size: 10 µg, 50 µg and 100 µg

Synonyms: CEPTRL2; claudin-1; CLDN-7; CPETRL2; Hs.84359

Target: CLDN7

UNIPROT ID: O95471

Description: Human CLDN7 full length protein-synthetic nanodisc

Background: This gene encodes a member of the claudin family. Claudins are integral membrane proteins and components of tight junction strands. Tight junction strands serve as a physical barrier to prevent solutes and water from passing freely through the paracellular space between epithelial or endothelial cell sheets, and also play critical roles in maintaining cell polarity and signal transductions. Differential expression of this gene has been observed in different types of malignancies, including breast cancer, ovarian cancer, hepatocellular carcinomas, urinary tumors, prostate cancer, lung cancer, head and neck cancers, thyroid carcinomas, etc.. Alternatively spliced transcript variants encoding different isoforms have been found.[provided by RefSeq, May 2010]

Species/Host: HEK293

Molecular Weight: The human full length CLDN7 protein has a MW of 22.9 kDa

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
