ANTI GABA B RECEPTOR 2 NANOBODY

Anti GABA B Receptor 2 Nanobody

Cat. #: 26202
Size: 100 µL
Gene Symbol: GABA B Receptor 2
Description: Anti GABA B Receptor 2 Nanobody
Background: GABA B Receptor 2 is a subunit of the metabotropic γ-aminobutyric acid (GABA) B-type receptor. It is mainly responsible for binding and activating downstream G proteins and mediating signal transmission. GABA B Receptor 2 belongs to the C-type family of G protein-coupled receptors, regulates inhibitory neurotransmission, and is related to the onset of epilepsy, pain, addiction and other diseases. It is an important drug development target.
This product is a highly specific and high-affinity nanobody for GABA B Receptor 2. It recognizes the extracellular structural region of GABA B Receptor 2 and can be used in experiments such as GABA B Receptor 2 expression detection and immunoprecipitation. It is a good GABA B Receptor 2 detection tool.
