

HUMAN HRH3 FULL LENGTH PROTEIN

Cat.#: 11114

Product Name: Human HRH3 Full Length Protein

Size: 10 µg; 50 µg and 100 µg

Synonyms: GPCR97; HH3R

Target: HRH3

UNIPROT ID: Q9Y5NI

Description: Human HRH3 Full Length Protein-Synthetic Nanodisc

Background: Histamine is a ubiquitous messenger molecule released from mast cells, enterochromaffin-like cells, and neurons. Its various actions are mediated by histamine receptors H1, H2, H3 and H4. This gene encodes one of the histamine receptors (H3) which belongs to the family 1 of G protein-coupled receptors. It is an integral membrane protein and can regulate neurotransmitter release. This receptor can also increase voltage-dependent calcium current in smooth muscles and innervates the blood vessels and the heart in cardiovascular system.

Species/Host: HEK293

Molecular Weight: The human full length HRH3 protein has a MW of 48.7 kDa

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.

Protein Families: Druggable Genome, Transmembrane

Protein Pathways: Neuroactive ligand-receptor interaction

ELISA assay to evaluate HRH3-Nanodisc 0.2µg Human HRH3-Nanodisc per well

Figure 1. Elisa plates were pre-coated with Flag Tag HRH3-Nanodisc (0.2µg/per well). Serial diluted anti-Flag monoclonal antibody solutions were added, washed, and incubated with secondary antibody before Elisa reading. From above data, the EC50 for anti-Flag monoclonal antibody binding with HRH3-Nanodisc is 2.708ng/ml.
