

HUMAN ALB PROTEIN, HIS TAG

Cat.#: 11388

Product Name: Human ALB Protein

Size : 10 µg, 50 µg and 100 µg

Synonyms: HSA;PRO0883;PRO0903;PRO1341

Target: ALB

UNIPROT ID: P02768

Description: Recombinant Human ALB with C-terminal 6xHis tag

Background: This gene encodes the most abundant protein in human blood. This protein functions in the regulation of blood plasma colloid osmotic pressure and acts as a carrier protein for a wide range of endogenous molecules including hormones, fatty acids, and metabolites, as well as exogenous drugs. Additionally, this protein exhibits an esterase-like activity with broad substrate specificity. The encoded preproprotein is proteolytically processed to generate the mature protein. A peptide derived from this protein, EPI-X4, is an endogenous inhibitor of the CXCR4 chemokine receptor. [provided by RefSeq, Jul 2016]

Species/Host: HEK293

Molecular Weight: The protein has a predicted molecular mass of 67.3 kDa after removal of the signal peptide. The apparent molecular mass of ALB-His is approximately 55-70 kDa due to glycosylation.

Molecular Characterization: ALB(Asp25-Leu609) 6×His tag

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
