

HUMAN CCL16 PROTEIN

Cat.#: 12100

Product Name: Human CCL16 Protein

Size: 10 µg, 50 µg and 100 µg

Synonyms: C-C Motif Chemokine 16; Chemokine CC-4; HCC-4; Chemokine LEC; IL-10-Inducible Chemokine; LCC-1; Liver-Expressed Chemokine; Lymphocyte and Monocyte Chemoattractant; LMC; Monotactin-1; MTN-1; NCC-4; Small-Inducible Cytokine A16; CCL16; ILINCK; NCC4; SCYA16

Target: CCL16

UNIPROT ID: O15467

Description: Recombinant Human C-C Motif Chemokine 16 is produced by our E.coli expression system and the target gene encoding Gln24-Gln120 is expressed.

Background: CCL16 is a member of CC chemokine family. CCL16 cDNA encodes a 120 amino acid peptide along with a 23 amino acids signal peptide that is cleaved to generate 97 amino acid protein. CCL16 is distantly related to other CC chemokines, showing less than 30% sequence identity. CCL16 elicits its effects on cells by interacting with cell surface chemokine receptors such as CCR1, CCR2, CCR5 and CCR8. Recombinant CCL16 has been shown to chemoattract human monocytes and THP1 cells but not resting lymphocytes nor neutrophils. CCL16 has potent myelosuppressive activity, suppresses proliferation of myeloid progenitor cells. CCL16 induces a calcium flux in THP1 cells that can be desensitized by prior exposure to RANTES, suggesting that CCL16 and RANTES share the same receptor in THP1 cells.

Species/Host: E.coli

Molecular Weight: 11 KDa

Molecular Characterization: Not available

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
