

HUMAN CD235A PROTEIN, HFC TAG

Cat.#: 11506

Product Name: Human CD235A Protein

Size: 10 µg, 50 µg and 100 µg

Synonyms: Glycophorin-A;CD235a;PAS-2;GYPA;GPA

Target: CD235A

UNIPROT ID: P02724

Description: Recombinant human CD235A protein with C-terminal human Fc tag

Background: Glycophorins A (GYPA) and B (GYPB) are major sialoglycoproteins of the human erythrocyte membrane which bear the antigenic determinants for the MN and Ss blood groups. In addition to the M or N and S or s antigens that commonly occur in all populations, about 40 related variant phenotypes have been identified. These variants include all the variants of the Miltenberger complex and several isoforms of Sta, as well as Dantu, Sat, He, Mg, and deletion variants Ena, S-s-U- and Mk. Most of the variants are the result of gene recombinations between GYPA and GYPB. [provided by RefSeq, Jul 2008]

Species/Host: HEK293

Molecular Weight: The protein has a predicted molecular mass of 33.3 kDa after removal of the signal peptide. The apparent molecular mass of CD235A-hFc is approximately 35-55 kDa due to glycosylation.

Molecular Characterization: CD235A(His28-Glu91) hFc(Glu99-Ala330)

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
