

HUMAN CFH PROTEIN

Cat.#: 12274

Product Name: Human CFH Protein

Size: 10 µg, 50 µg and 100 µg

Synonyms: FH;HF;HF1;HF2;HUS;FHL1;AHUS1;AMBPI;ARMD4;ARMS1;CFHL3

Target: CFH

UNIPROT ID: P08603

Description: Recombinant human CFH Protein with C-terminal 10xHis tag

Background: This gene is a member of the Regulator of Complement Activation (RCA) gene cluster and encodes a protein with twenty short consensus repeat (SCR) domains. This protein is secreted into the bloodstream and has an essential role in the regulation of complement activation, restricting this innate defense mechanism to microbial infections. Mutations in this gene have been associated with hemolytic-uremic syndrome (HUS) and chronic hypocomplementemic nephropathy. Alternate transcriptional splice variants, encoding different isoforms, have been characterized. [provided by RefSeq, Oct 2011]

Species/Host: HEK293

Molecular Weight: The protein has a predicted molecular mass of 138.4 kDa after removal of the signal peptide. The apparent molecular mass of CFH-His is approximately 130–250 kDa due to glycosylation.

Molecular Characterization: CFH(Glu19–Arg1231) 10×His tag

Purity: The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at –20°C to –80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at –80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
