

HUMAN EPHA2 PROTEIN, HIS TAG**Cat.#:** 11249**Product Name:** Human EPHA2 Protein**Size:** 10 µg, 50 µg and 100 µg**Synonyms:** ARCC2;CTPA;CTPPI;CTRCT6;ECK**Target:** EPHA2**UNIPROT ID:** P29317**Description:** Recombinant Human EPHA2 Protein with C-terminal 6xHis tag

Background: This gene belongs to the ephrin receptor subfamily of the protein-tyrosine kinase family. EPH and EPH-related receptors have been implicated in mediating developmental events, particularly in the nervous system. Receptors in the EPH subfamily typically have a single kinase domain and an extracellular region containing a Cys-rich domain and 2 fibronectin type III repeats. The ephrin receptors are divided into 2 groups based on the similarity of their extracellular domain sequences and their affinities for binding ephrin-A and ephrin-B ligands. This gene encodes a protein that binds ephrin-A ligands. Mutations in this gene are the cause of certain genetically-related cataract disorders.[provided by RefSeq, May 2010]

Species/Host: HEK293

Molecular Weight: The protein has a predicted molecular mass of 57.0 kDa after removal of the signal peptide. The apparent molecular mass of EPHA2-His is approximately 55-70 kDa due to glycosylation.

Molecular Characterization: EPHA2 (Ala24-Asn534) 6×His tag

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
