

HUMAN IL5RA PROTEIN, HIS TAG**Cat.#:** 11212**Product Name:** Human IL5RA Protein**Size:** 10 µg, 50 µg and 100 µg**Synonyms:** IL5Ra;D125;L-5 R alpha**Target:** IL5RA**UNIPROT ID:** Q01344**Description:** Recombinant human L5RA protein with C-terminal 6xHis tag

Background: The protein encoded by this gene is an interleukin 5 specific subunit of a heterodimeric cytokine receptor. The receptor is comprised of a ligand specific alpha subunit and a signal transducing beta subunit shared by the receptors for interleukin 3 (IL3), colony stimulating factor 2 (CSF2/GM-CSF), and interleukin 5 (IL5). The binding of this protein to IL5 depends on the beta subunit. The beta subunit is activated by the ligand binding, and is required for the biological activities of IL5. This protein has been found to interact with syndecan binding protein (syntenin), which is required for IL5 mediated activation of the transcription factor SOX4. Several alternatively spliced transcript variants encoding four distinct isoforms have been reported.

Species/Host: HEK293

Molecular Weight: The protein has a predicted molecular mass of 37.0 kDa after removal of the signal peptide. The apparent molecular mass of IL5RA-His is approximately 50-55 kDa due to glycosylation.

Molecular Characterization: IL5RA(Asp21-Pro338) 6xHis tag

Purity: The purity of the protein is greater than 90% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
