

HUMAN M-CSF PROTEIN, HIS TAG

Cat.#: 11369

Product Name: Human M-CSF Protein

Size: 10 µg, 50 µg and 100 µg

Synonyms: CSF-1;MCSF

Target: M-CSF

UNIPROT ID: P09603

Description: Recombinant Human M-CSF with C-terminal 6xHis tag

Background: The protein encoded by this gene is a cytokine that controls the production, differentiation, and function of macrophages. The active form of the protein is found extracellularly as a disulfide-linked homodimer, and is thought to be produced by proteolytic cleavage of membrane-bound precursors. The encoded protein may be involved in development of the placenta. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Sep 2011]

Species/Host: HEK293

Molecular Weight: The protein has a predicted molecular mass of 26 kDa after removal of the signal peptide. The apparent molecular mass of M-CSF-His is approximately 25-55 kDa due to glycosylation.

Molecular Characterization: M-CSF(Glu33-Arg255) 6xHis tag

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
