

MOUSE ADAM28 PROTEIN, HFC TAG

Cat.#: 12162

Product Name: Mouse ADAM28 Protein

Size: 10 µg, 50 µg and 100 µg

Synonyms: ADAM 28;TECADAM

Target: ADAM28

UNIPROT ID: Q9JLN6

Description: Recombinant mouse ADAM28 protein with C-terminal human Fc tag

Background: This gene encodes a member of the ADAM (a disintegrin and metalloprotease domain) family. Members of this family are membrane-anchored proteins structurally related to snake venom disintegrins, and have been implicated in a variety of biological processes involving cell-cell and cell-matrix interactions, including fertilization, muscle development, and neurogenesis. The protein encoded by this gene is a lymphocyte-expressed ADAM protein. This gene is present in a gene cluster with other members of the ADAM family on chromosome 8. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jan 2015]

Species/Host: HEK293

Molecular Weight: The protein has a predicted molecular mass of 98.5 kDa after removal of the signal peptide. The apparent molecular mass of mADAM28-hFc is approximately 100-130 kDa due to glycosylation.

Molecular Characterization: Mouse ADAM28(Ile21-Phe668) hFc(Glu99-Ala330)

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
