

MOUSE MESOTHELIN PROTEIN, HIS TAG

Cat.#: 12164

Product Name: Mouse Mesothelin Protein

Size: 10 µg, 50 µg and 100 µg

Synonyms: Mesothelin;Pre-pro-megakaryocyte-potentiating factor

Target: Mesothelin

UNIPROT ID: Q61468

Description: Recombinant mouse Mesothelin protein with C-terminal 6xHis tag

Background: This gene encodes a preproprotein that is proteolytically processed to generate two protein products, megakaryocyte potentiating factor and mesothelin. Megakaryocyte potentiating factor functions as a cytokine that can stimulate colony formation of bone marrow megakaryocytes. Mesothelin is a glycosylphosphatidylinositol-anchored cell-surface protein that may function as a cell adhesion protein. This protein is overexpressed in epithelial mesotheliomas, ovarian cancers and in specific squamous cell carcinomas. Alternative splicing results in multiple transcript variants, at least one of which encodes an isoform that is proteolytically processed. [provided by RefSeq, Feb 2016]

Species/Host: HEK293

Molecular Weight: The protein has a predicted molecular mass of 35.0 kDa after removal of the signal peptide. The apparent molecular mass of mMesothelin-His is approximately 35-40 kDa due to glycosylation.

Molecular Characterization: Mouse Mesothelin(Asp298-Ser600) 6×His tag

Purity: The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
